Bucket Hanger Kit

The heavy duty **SaniServ** bucket hanger is designed to eliminate the need for an employee to stand and hold a 25 to 30 pound bucket under the spigot while draining product, cleaning solutions or sanitizer during the cleaning process. Typically, rather than holding the bucket, the employee will rest it on the drip tray where the bucket can slip and spill. If the bucket has a bail they will hang it on the spigot plunger or handle. Hanging the bucket on the spigot eventually leads to the face plate cracking. It is not a case of *if* it will crack, but *when* it will crack. We have received many complaints from end users about cracking face plates. When we receive the face plate for inspection, 99% of the cracks are stress cracks caused by buckets hanging from the spigot. This is a very expensive part to replace.

The new bucket hanger fits on the top of the machine with one end extending into the mix pan and then hangs over the front of the machine. The hook on the front of the bucket hanger holds the bail of the bucket, allowing it to swing under the spigot opening. This makes the process nearly hands free.

The bucket hanger is made of 11 gauge stainless steel and will support up to 20 quarts of liquid. The bucket hangers are machine specific, therefore, you will need to specify the model number when ordering the bucket hanger. Bucket hangers are sold separately and in a kit, which includes a specially designed heavy duty **SaniServ** bucket.

Cleaning Buckets and rerun containers increase your productivity with **SaniServ** Products!

Cord Sets

SaniServ is pleased to announce the availability of the cord, plug and receptacle options for all 230 volt machines. The cord and plug will be assembled but not attached to the machine and shipped with receptacle. This is part of our “Plug and Play” concept. Making ownership of **SaniServ** equipment as friendly as possible is top priority.
